

## DaisyNET II and Bachmann - The perfect combination for your conference room!

The integrated solution with a DaisyNET II transceiver built into a long version PDU, either in the CONFERENCE or TOPFRAME series. This relieves you of the extra work and time required to patch together your own, often unsatisfactory, solution. By integrating the DaisyNET II into the elegant and professional Bachmann frames, you can now offer your customers a turn-key, customized complete solution. The user can now connect his sources

directly into the DaisyNET II transceiver module and switch between the inputs via the integrated and illuminated 4-button keypad. The solution also features an integrated 230 V plug and an USB connector for charging smart phones, tablets, etc. The system comes preconfigured and assembled by COMM-TEC.
