

THAT MONDO MATRIX YOU INSTALLED RECENTLY?

IT NOW SUPPORTS DVI

Magenta's brand new MultiView DVI Series delivers 1920x1080 DVI-D single link video over standard UTP cable. As the product carries the industry-respected MultiView brand, users can, of course, be assured of top performance and crisp video replication.

MultiView DVI's most exciting feature is *its full backwards compatibility* with Magenta's best-in-class UTP-based crosspoint switch, the Mondo Matrix. Combining MultiView DVI with a Mondo Matrix provides integrators with the ability to implement digital video when utilizing one of the largest switches in the world, as the Mondo is configurable in increments of 16 inputs and outputs, from 16x16 all the way to 256x512.

The adaptability of MultiView DVI ensures that architects,

integrators, installers and end-users are presented with more options than ever before for designing, installing and operating a switched environment that can easily adapt to multiple video formats, alongside audio and serial signals.

MULTIVIEW DVI: DIGITAL VIDEO EXTENSION WITH FULL MONDO MATRIX COMPATIBILITY

Since MultiView DVI is fully backwards compatible with the Mondo Matrix, a Mondo that is already in service and powering a casino, government black hole, retail establishment, museum or entertainment venue is ready to go digital, *right now!*
